## Advice to Authors

The illustrations that will appear in your contribution will be shown to best advantage if you follow the brief set of instructions below. Please read carefully. Thank you.

The Publisher

### Preparation of Line Drawings

Illustration copy should be prepared to fit the format of the column or printed page (print area) so that 1:1 reproduction is possible. In case reduction is absolutely necessary, please state the alternative scale desired.

The publisher reserves the right to reduce or enlarge illustrations.

Drawings are to be twice the final size and executed in indelible black ink.

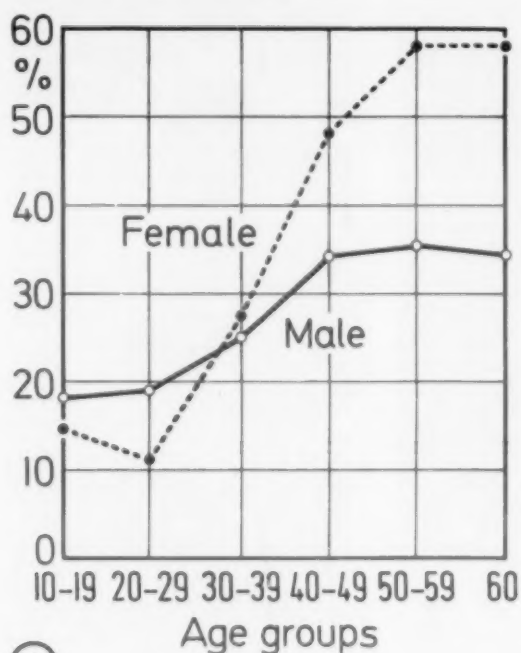

Important points to note: thickness of lines, size of inscriptions, size of measuring points, adequate spacing of shaded and dotted areas.

Words should be in upper- and lower-case characters, not capitals.

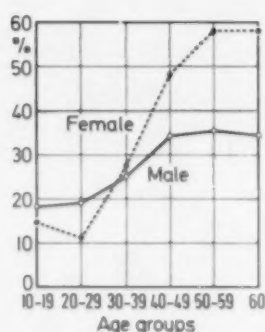

The following are optimal sizes as they finally appear in the journal:

Capital letters and numbers: 2 mm

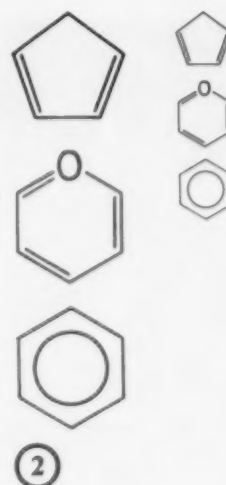

Lower-case letters: 1.6 mm.

①

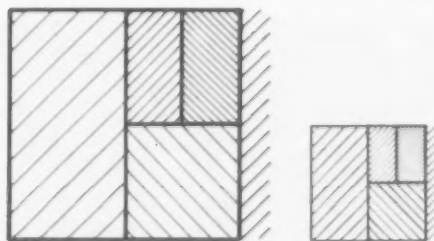

samples 1 to 5 show  
the original size and  
after 50% reduction

②

③

**Selection of Illustration Material for Halftones** (photographs, micrographs, X-rays, instrument traces etc.).

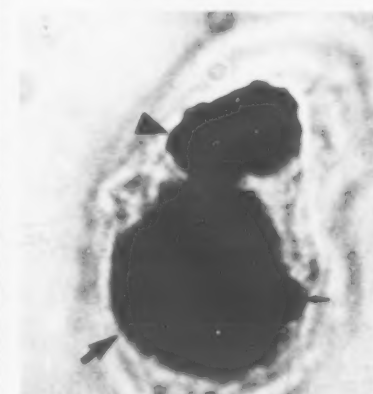

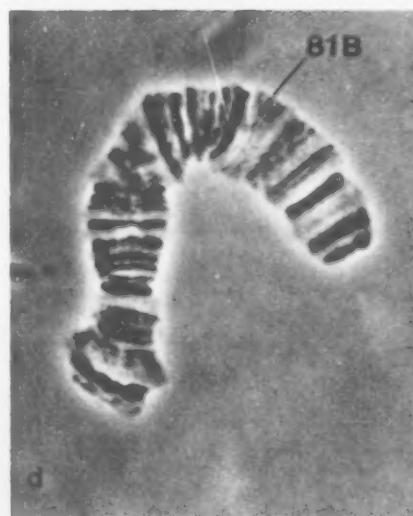

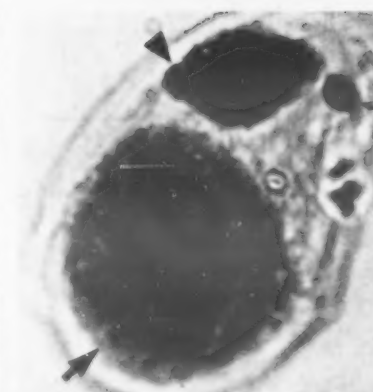

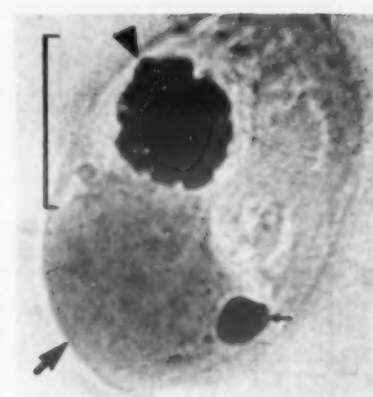

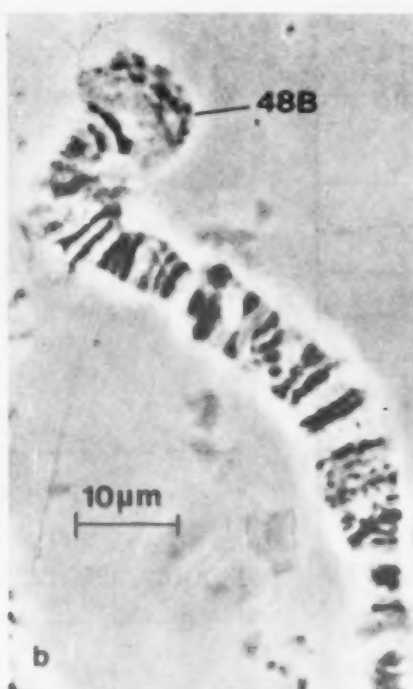

Photographs should be sharp, well-contrasted glossy prints of the original negative, trimmed at right angles. Halftone illustrations should be prepared to fit the format of the printed page (print area) so that 1:1 reproduction is possible. In case reduction is absolutely necessary, please state the alternative scale desired. The publisher reserves the right to reduce or enlarge illustrations.

Mark or crop marginal portions which are not required (at right angles, please).

Please see that illustrations which are to appear together are mounted accordingly as plates and that they correspond in size. Also they should not exceed the print area of the page, including room for the legend.

With X-rays, please indicate the significant parts on the back of the copy, or on an overlay.

Inscriptions, marks and scale lines should preferably be drawn neatly in black ink in an appropriate size on the face of the illustrations. Inscriptions should be about 3 mm high. Where Letraset is used, please handle it carefully and protect the photographs with an overlay.

## **Kinetics of Drug Action**

**Editor:** J.M. van Rossum

**With contributions by** J. Blanck, F.G. van den Brink, C.A.M. van Ginneken,  
R.E. Gosselin, P.T. Henderson, H.C.J. Ketelaars, E. Krüger-Thiemer, D. Mackay,  
J.M. van Rossum, W. Scheler, T.B. Vree

1977. 105 figures. 22 tables. XVII, 436 pages.  
Cloth DM 220,-; US \$ 110.00  
ISBN 3-540-08023-6

The contributions of this volume combine to make up an integrated presentation of the kinetics of drug action.

The fundamental aspects of transport processes across membranes relevant to drug transport are treated in the opening chapter. This is followed by a discussion of pharmacokinetics, including the kinetics of absorption, distribution, excretion and metabolism under linear and non-linear conditions. Drug schedules are discussed extensively.

Drug-receptor interactions are treated in a further contribution. Another chapter presents a critical survey of current drug receptor theories.

The kinetics of drug-receptor interaction are discussed in a paper that offers a new model. The relevance of the kinetics of drug transport and drug-receptor interaction for their effects as a time-dependent function is treated.

The author's approach to the fundamental processes in drug action is critical and searching. The knowledge gained will prove fruitful in research and therapy.

**Contents:** Physiochemical Fundamentals and Thermodynamics of the Membrane Transport of Drugs. — Pharmacokinetics. Kinetic Aspects of Absorption, Distribution, and Elimination of Drugs. — Pharmacokinetics of Biotransformation. — General Theory of Drug-Receptor Interactions. — Drug Receptor Interaction Models. Calculation of Drug Parameters. — A Critical Survey of Receptor Theories of Drug Action. — Drug Receptor-Inactivation: A New Kinetic Model. — Kinetics of Drug-Receptor Interaction.

H.O. Schild, R. Schmidt, E. Schreier, P.A. Stadler, E. Stürmer, R.D. Venn,  
H. Wagner, H.P. Weber, H. Weidmann

1978. 159 figures. XVIII, 1003 pages  
Cloth DM 280,-; US \$ 140.00  
ISBN 3-540-08475-4

This is the first comprehensive review of the ergot field since Barger's article in this Handbook in 1938. The following aspects of ergot alkaloids are discussed: Basic pharmacological properties, effects on the uterus, actions on the circulation, actions on the central nervous system, clinical pharmacology of senile cerebral insufficiency compounds with hallucinogenic activity, influence on the endocrine system, metabolic effects, toxicological considerations, metabolism, pharmacokinetics and bioavailability. Special emphasis is placed on interaction of ergot alkaloids with adrenergic, serotonergic and dopaminergic receptors, effects of bromocriptine on endocrine functions, of LSD on psychic functions, of hydergine in geriatrics, of ergotamine in migraine and of dihydroergotamine in orthostatic hypotension. Clinical pharmacological aspects are an integral part of the volume.

# Modular Electronics

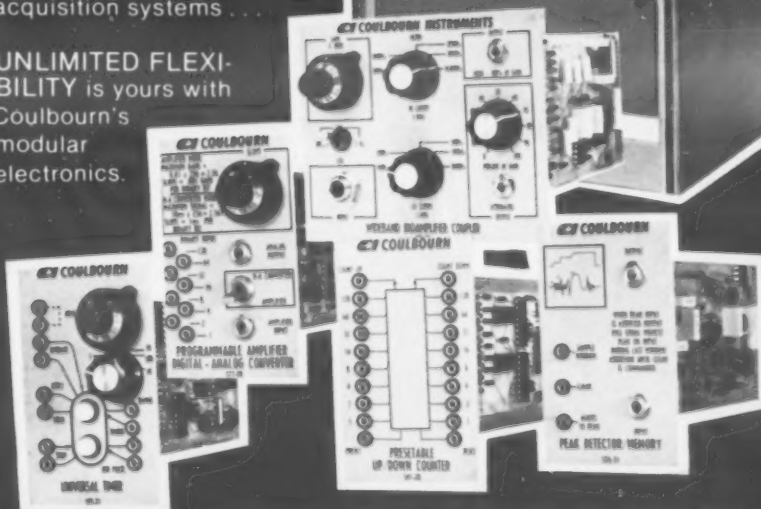

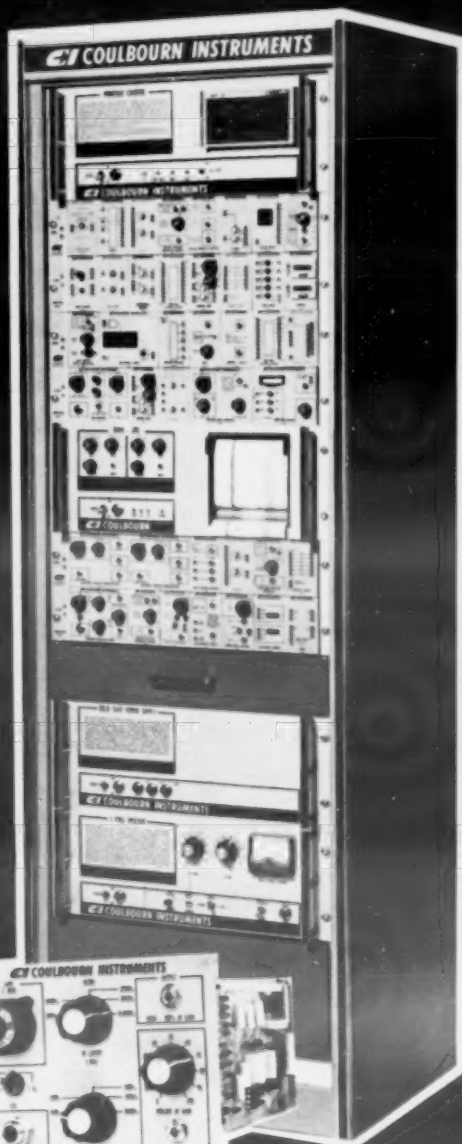

## For the Scientific Laboratory

OVER 60 PLUG-IN MODULES for analog and digital programming; timing, counting, and signal conditioning. Featuring digital control of analog functions, gain attenuation, signal frequency, filter frequency.

USE THEM FOR experiment control, computer interface, data acquisition, ancillary electronics needed with polygraphs, computer systems, and electronic instruments. Applications in the life sciences, physical and earth sciences, and engineering.

BUILD YOUR OWN ... compact portables to large laboratory cabinets ... special purpose instruments to experiment control and data acquisition systems ...

UNLIMITED FLEXIBILITY is yours with Coulbourn's modular electronics.
